VPX577

Quad ADC 12-bit @ 10.4 GSPS with Dual DAC @ 9 GSPS
Virtex UltraScale+, 6U VPX

VPX577

Key Features

- Virtex UltraScale+ with XCVU13P FPGA
- Two FPGA banking option for how the ADC/DAC are connected to the SLR region (ordering option E)
- Zynq UlatraScale+ with XCZU4CG
- Dual bank of DDR-4 memory with 8G per bank
- Quad ADC 12-bit @ 10.4 GSPS with TI ADC12DJ5200 or Octal ADC 12-bit @ 5.2 GSPS
- Dual DAC 14-bit @ 9 GSPS with TI DAC38RF82
- Health Management through dedicated Processor

Benefits

- XCVU13P has large internal memory
- Reference design with VHDL source code speeds application development
- Electrical, mechanical, software, and system-level expertise in house
- Full system supply from industry leader
- AS9100 and ISO9001 certified company

OpenVPX™

vadatech
THE POWER OF VISION

VPX577

The VPX577 provides Quad ADC with sampling rates of up to 10.4 GSPS at 12-bit resolution utilizing the TI ADC12DJ5200. Each ADC is configurable to run as dual channel at half the sampling rate (5.2 GSPS) to provide Octal channels.

The module has Dual DAC based on TI DAC38RF82 with 14-bit at 9 GSPS.

Interfacing to the FPGA is a 64-bit dual bank of DDR-4 memory with 8GB per bank.

The XCVU13P FPGA contains large 360 Mb on-chip UltraRAM, excellent for radar simulators and smart jammers. The FPGA interfaces directly to rear I/O via SERDES and LVDS, supporting PCIe, SRIO, GbE/10GbE/40GbE/100GbE or Aurora backplane connections. General purpose I/O are routed to the P2.

ADCs have a common sampling rate from common PLL locked to a 10/100 MHz reference clock sourced from front panel or backplane. The sampling clock on the ADCs are fully coherent with each other. The DAC have a coherent sampling clock as well.

The VPX577 has two routing option for the ADC/DAC interfacing to the FPGA. Option E = 0 connects dual ADC and a single DAC on the top SLR region and dual ADC and single DAC on the bottom SLR region. Option E = 1 connects all four ADC on the top SLR region and dual DAC on the bottom SLR region.

The Module has a Zynq UltraScale+ FPGA on board. The Zynq has dual GbE to the P1 as well as x2 SERDES to the P1 which could be configured as PCIe. The Zynq interfaces to the Virtex FPGA via PCIe x1 with PCIe Tandem Configuration capability, additional x2 SERDES, and GPIO.

The VPX577 includes platform health management/monitoring capability using VadaTech's field-proven IPMI software. An onboard management controller has the ability to access board sensors and manage FPGA image updates.

The unit is available in a range of temperature and shock/vib specifications per ANSI/VITA 47, up to V3 and OS2.

Reference Design

VadaTech provides an extensive range of Xilinx based FPGA products. The FPGA products are in two categories; FPGA boards with FMC carriers and FPGA products with high-speed ADC and DACs. The FPGA products are designed in various architectures such as AMC modules, PCIe cards and Open VPX.

VadaTech provides a reference design implementation for our FPGAs complete with VHDL source code, documentation and configuration binaries. The reference design focuses on the I/O ring of the FPGA to demonstrate low-level operation of the interconnections between the FPGA and other circuits on the board and/or backplane. It is designed to prove out the hardware for early prototyping, engineering/factory diagnostics and customer acceptance of the hardware, but it does not strive to implement a particular end application. The reference VHDL reduces customer time to develop custom applications, as the code can be easily adapted to meet customer's application requirements.

The reference design allows you to test and validate the following functionality (where supported by the hardware):

- Base and Fabric channels
- Clocks
- Data transfers
- Memory
- User defined LEDs

Xilinx provides Vivado Design Suite for developing applications on Xilinx based FPGAs. VadaTech provides reference VHDL developed using the Vivado Design Suite for testing basic hardware functionality. The reference VHDL is provided royalty free to use and modify on VadaTech products, so can be used within applications at no additional cost. However, customers are restricted from redistributing the reference code and from use of this code for any other purpose (e.g. it should not be used on non-VadaTech hardware).

The reference VHDL is shipped in one or more files based on a number of ordering options. Not all ordering options have an impact on the FPGA and a new FPGA image is created for those options that have direct impact on the FPGA. Use the correct reference image to test your hardware. For more information, refer to the FPGA reference design manual for your device which can be accessed from the customer support site along with the reference images.

Supported Software

- Default FPGA image stored in flash memory
- Linux BSP
- Build Scripts
- Device Driver
- Reference application projects for other ordering options

The user may need to develop their own FPGA code or adapt VadaTech reference code to meet their application requirements. The supplied pre-compiled images may make use of hardware evaluation licenses, where necessary, instead of full licenses. This is because VadaTech does not provide licenses for the Vivado tool or Xilinx IP cores, so please contact Xilinx where these are required.

Xilinx also provides System Generator tools for developing Digital Signal Processing (DSP) applications.
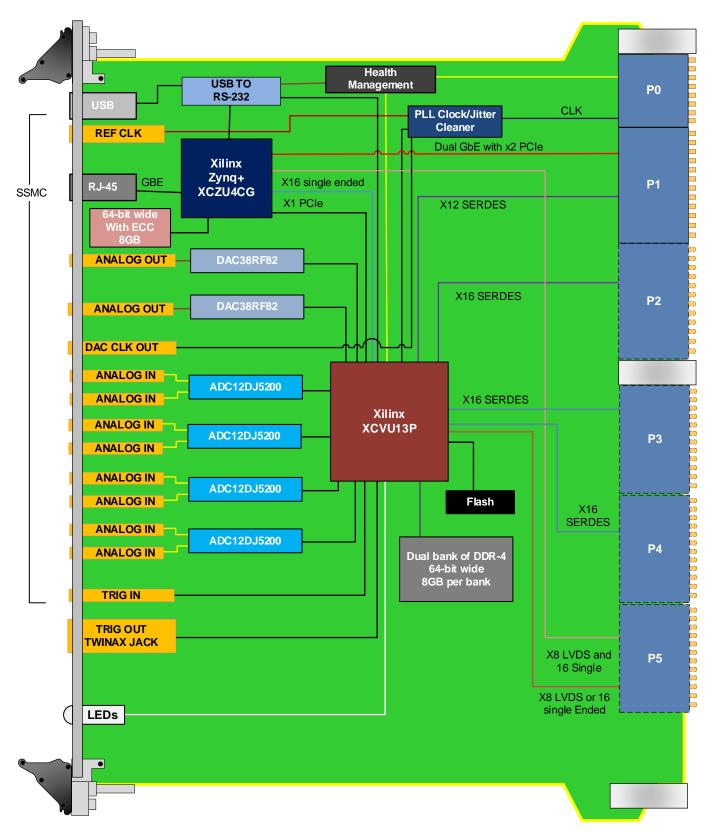

See the following links:

[Xilinx Vivado Design Suite](), [Xilinx System Generator for DSP]().

# Software Development Acceleration

Please contact VadaTech for different software packages that are available for the VPX577.

Warranty	Two (2) years, see VadaTech Terms and Conditions	

INTEGRATION SERVICES AND APPLICATION-READY PLATFORMS

VadaTech has a full ecosystem of OpenVPX, ATCA and MTCA products including chassis platforms, shelf managers, AMC modules, Switch and Payload Boards, Rear Transition Modules (RTMs), Power Modules, and more. The company also offers integration services as well as pre-configured Application-Ready Platforms. Please contact VadaTech Sales for more information.
