SOF209
Quad ADC 14-bit @ 3 GSPS, SOFI Module

Key Features
- Quad ADC 14-bit @ 3 GSPS (dual AD9208)
- Optional additional quad ADC using a further two AD9208
- Onboard Wideband PLL structure
- LMK04821 PLL (with 100 MHz VCXO) for JESD lane clocking and sysref

SOF209 provides four ADC channels via two AD9208s. Optional daughter card DA71 adds another two AD9208s, supporting up to eight ADC channels in total. Reference clock is accepted from the front panel via PLL.

NOTE: This module is not orderable as a standalone item and must be purchased as part of an AMSxxx (AMC module) or VPSxxx (3U VPX module) product. See SOFI Overview for details.

SOFI Modules

SOFI modules are physically similar to FMC modules but are incompatible with FMC carriers, and are not designed to be interchangeable in the field.

See SOFI Overview for compatibility with AMC and 3U VPX carriers. If the particular combination of form factor, FPGA and ADC/DAC performance you require is not yet listed, please contact your local VadaTech sales team for details of how we can support you.

NOTE: This module is not orderable as a standalone item and must be purchased as part of an AMSxxx (AMC module) or VPSxxx (3U VPX module) product.
