UTC040C – MicroTCA Carrier Hub (MCH) Conduction Cooled, PCIe Gen3

The VadaTech UTC040C is the most feature-rich conduction cooled MicroTCA Carrier Hub (MCH) in the market. Its management software is based on VadaTech’s robust Carrier Manager and Shelf Manager which have been deployed for years with proven results. It also manages PCIe Gen 3 Switch as well as the GbE Switch.

The UTC040C runs Linux on its centralized quad-core CPU and is hot-swappable/fully redundant when used in conjunction with a second instance of the module.

The firmware is HPM.2 compliant which allows for easy upgrades. It provides Master JTAG services to the AMCs via the JSM.

Benefits of Choosing VadaTech

- Robust, field proven shelf manager software
- Double module design enhances thermal performance
- Virtual JTAG capability for remote programming and debugging
- Full system supply from industry leader
- AS9100 and ISO9001 certified company

Key Features

- Double module, mid-size per AMC.0
- Conduction cooled for rugged applications
- Unified 1GHz quad-core CPU for MCMC (MicroTCA Carrier Management Controller), Shelf Manager, Clocking, and Fabric management
- Layer 2/3 managed GbE Switch
- Front panel provides 12 ports of GbE
- Non-blocking PCIe Gen3 Switch with up to four PCIe Virtual Domains
**IPMI CARRIER MANAGER / SHELF MANAGER / PROTOCOL ANALYZER**

The UTC040C utilizes the same proven standards-compliant IPMI management stack that has been utilized successfully in our previous generation MCH products. It supports carrier manager, shelf manager, and protocol analyser operations to help facilitate a seamless chassis integration experience. The IPMI stack enables a rich feature set including:

- IPMI Version 2.0 with IPMI v1.5 compatibility
- SDR, FRU, and SEL storage interfaces (SEL stored in MRAM for high-speed/non-volatile/no-wear-out access)
- Intelligent temperature, voltage, and current sensing
- Shelf cooling policy
- Shelf activation and power management / Automatic fail-over/redundancy management
- Alarm controls
- Event notification and flexible alerting policies
- Backplane E-Keying
- CLI, SNMP, RMCP+, HTTP, and HPI
- IPMB Protocol Analyzer GUI for use on PC
- ScorpionWare GUI system manager integration tool on PC available separately

**BASE CHANNEL ETHERNET SWITCH**

The UTC040C provides includes as standard a managed layer two/three GbE switch with 12 ports 10/100/1000-BaseT interface via the front panel.

**FAT PIPES FABRICS**

The UTC040C provides the following fat pipes fabric capability:

- PCIe Gen3 Switch
  - Automatic speed negotiation for 2.5/5/8Gbps per lane
  - Virtual Switch/Multiple domain/Non-transparent port support to enable partitioning of the system with multiple root complexes
  - Includes an extra internal port which enables the GPS precision time-stamping engine (accessible from an AMC root complex board)
  - 1024Gbps aggregate bandwidth / non-blocking / cut-through architecture

**FABRIC CLOCK OPTION**

The UTC040C has the capability to provide a 100 MHz HCSL PCIe Gen3-compliant fabric clock to each AMC. This option enables the recommended synchronous PCIe clocking approach within the chassis when used in combination with the PCIe fabric.

**JTAG MASTER / JTAG VIA ETHERNET VIRTUAL PROBE**

The UTC040C provides JTAG Master Capability to send out configuration data streams via the chassis JTAG Switch Module (JSM) to configure arbitrary JTAG Slave devices on AMC cards. Virtual Probe services are also available to provide JTAG via Ethernet for specific vendors such as Xilinx and Altera. This allows for standard development tools such as Xilinx iMPACT/ChipScope and Altera Programmer/SignalTap to treat the MCH/JSM combination as if it was a standard JTAG probe. This approach frees the developer from having to attach JTAG probes directly to the AMC or JSM which can be difficult when systems are already fully assembled. It also allows for remote debugging across long distances when required without the need to install additional JTAG equipment on-site.

### INTEGRATION SERVICES AND APPLICATION-READY PLATFORMS

VadaTech has a full ecosystem of ATCA and μTCA products including chassis platforms, shelf managers, AMC modules, Switch and Payload Boards, Rear Transition Modules (RTM), Power Modules, and more. The company also offers integration services as well as pre-configured Application-Ready Platforms. Please contact VadaTech Sales for more information.

ORDERING OPTIONS

UTC040C – A00 – 000 – G0J

A = Fabric *
0 = None
1 = PCIe Gen3 with Virtual Domain

G = JTAG Virtual Probe
0 = None
1 = Included

J = Temperature & Coating
0 = Commercial, no coating (-5 to +55° C)
1 = Commercial Humiseal 1A33 Polyurethane (-5 to +55° C)
2 = Commercial, 1B31 Acrylic (-5 to +55° C)
3 = Industrial, no coating (-20 to +70° C)
4 = Industrial, Humiseal 1A33 Polyurethane (-20 to +70° C)
5 = Industrial, 1B31 Acrylic (-20 to +70° C)
6 = Extended, Humiseal 1A33 Polyurethane (-40 to +85° C)**
7 = Extended, 1B31 Acrylic (-40 to +85° C)**

Notes:  
* A base channel GbE included
**At the edge of the module.
