VTX994

One Slot 6U VPX Benchtop and Rackmount Chassis with RTM for Conduction Cooled Module

Key Features
- One slot 6U VPX benchtop platform for Conduction cooled modules
- Vertical/Horizontal Benchtop positioning or 19" Rackmount option
- Multiple backplane configurations for VITA 66.4, VITA 66.5, VITA 67.2, etc. by selectable connector options
- Chassis monitors the temperature of the wedgelock and maintains the required level
- Removable panels allow ease of access for probing
- Support for Rear Transition Modules (RTMs)
- Health monitoring via shelf manager (VadaTech VT040 is included within the chassis)
- JTAG connector
- User setting of SYSRESET, NVMRO, etc.
- Option to mount special I/O in the rear
- VBAT provided by onboard battery pack

Benefits
- Allows development of conduction cooled modules in a benchtop environment
- Optional shelf manager supports Tier 2 Health Management
- 400W AC Power supply
- Ease of access to board for debug and development
- Electrical, mechanical, software, and system-level expertise in house
- Full system supply from industry leader
- AS9100 and ISO9001 certified company

OpenVPX™
vadatech
THE POWER OF VISION
VTX994

The VTX994 is a single slot 6U VPX chassis for board bring-up and testing of conduction cooled 6U VPX modules. The chassis can accept a front and a rear module. The panels on both the front and rear slots are removable for ease of probing and debugging.

The Chassis CPU will monitor and maintain the VPX module wedge temperature, set by the user. This allows testing of the conduction cooled module without going through the thermal chamber.

The unit can be horizontally or vertically bench mounted for ease of access or has a 19” Rackmount option.

Power Supply
The VTX994 Universal AC power supply provides 400W to the chassis. The chassis supplies all the necessary power (+12V, -12V, +5V, etc.) to the module in accordance with VITA 46 specifications.

A battery pack is included that provides VBAT to the module. The chassis provides the current draw on the +12V and +5V by the VPX module and it’s associated RTM.

Cooling
Variable speed fans controlled by the onboard CPU keeps the wedge at the user defined temp.

Backplane
The backplane provides all the necessary VITA 46 signals set by the user (NVMRO, SYSRESET, SYS_CON, driver the dual clock, etc.). All the connectors are installed P0 thru P6 and are routed from the front to the rear.

Health Monitoring
The chassis comes with the VadaTech 4th Generation shelf manager (VT040) that monitors the VPX board sensors in compliance to VITA 46.11. The VT040 supports Tier 2 Health Management. For a more complete and detail description of the VT040, the data sheet may be downloaded from VadaTech web page.

JTAG
The backplane breaks-out the JTAG signals via a header connector to enable external connection of a JTAG probe.

I/O
The VTX994 chassis could be provide for custom I/O such as Optical, MIL-STD-3899, etc. Please contact VadaTech for custom I/O configuration.

OpenVPX allows for a wide range of pin assignments and use cases. Prior to purchasing VadaTech products as standalone items (i.e., not part of an integrated platform) please consult with VadaTech on the system architecture to ensure compatibility.

INTEGRATION SERVICES AND APPLICATION-READY PLATFORMS

VadaTech has a full ecosystem of OpenVPX, ATCA and MTCA products including chassis platforms, shelf managers, AMC modules, Switch and Payload Boards, Rear Transition Modules (RTMs), Power Modules, and more. The company also offers integration services as well as pre-configured Application-Ready Platforms. Please contact VadaTech Sales for more information.

Choose VadaTech

We are technology leaders
• First-to-market silicon
• Constant innovation
• Open systems expertise

We commit to our customers
• Partnerships power innovation
• Collaborative approach
• Mutual success

We deliver complexity
• Complete signal chain
• System management
• Configurable solutions

We manufacture in-house
• Agile production
• Accelerated deployment
• AS9100 accredited
