AdvancedTCA[®]

VT053

The VT053 AdvancedTCA 4th Generation Shelf Manager is designed for use with VadaTech VT831 or VT832 ATCA Chassis.

Full redundancy and failover the Shelf Manager side can be achieved by using two VT053's in the system.

The VT053 can run as a protocol analyzer to monitor, inject, capture and validate I2C traffic on the Intelligent Platform Management Bus (IPMB). A Graphical User Interface (GUI) validates and displays the IPMB messages for injection into the shelf.

The VT053 is fully hot-swappable to minimize service downtime.

Scorpionware™ Software

VadaTech's Scorpionware™ software can be used to access information about the current state of the Shelf or the Carrier, obtain information such as the FRU population, or monitor alarms, power management, current sensor values, and the overall health of the Shelf. The software GUI is very powerful, providing a Virtual Carrier and FRU construct for a simple, effective interface.

IPMI Protocol Analyzer

VT053 can be used as an IPMI protocol analyzer, Figure .
